

The demo version of the programs is to demonstrate the capabilities of the program. Therefore, it is justified that this will be some kind of special file, and not the one that the user chooses from those that he has.

Place this archive in User part of InDesign scripts and unzip it. There are three folders for different languages — English, Spanish, French.

The demo file for this program is placed in the 'DemoFile' folder. This is an idml file. There is no need to change its name or change its contents. It has eight pages of text, there are two columns, there are narrow columns. There is enough text there to understand how the program searches for rivers in the text and works with them.

Open needed folder, run the demo version, this is the script 'Demo\_ShowMeRivers.jsx' and try to use this program.

All its features can be displayed by pressing the [?] button. Or print it, it's a pdf file in the 'Info' folder.
